

COLLEGENTIC BLUEPRINT

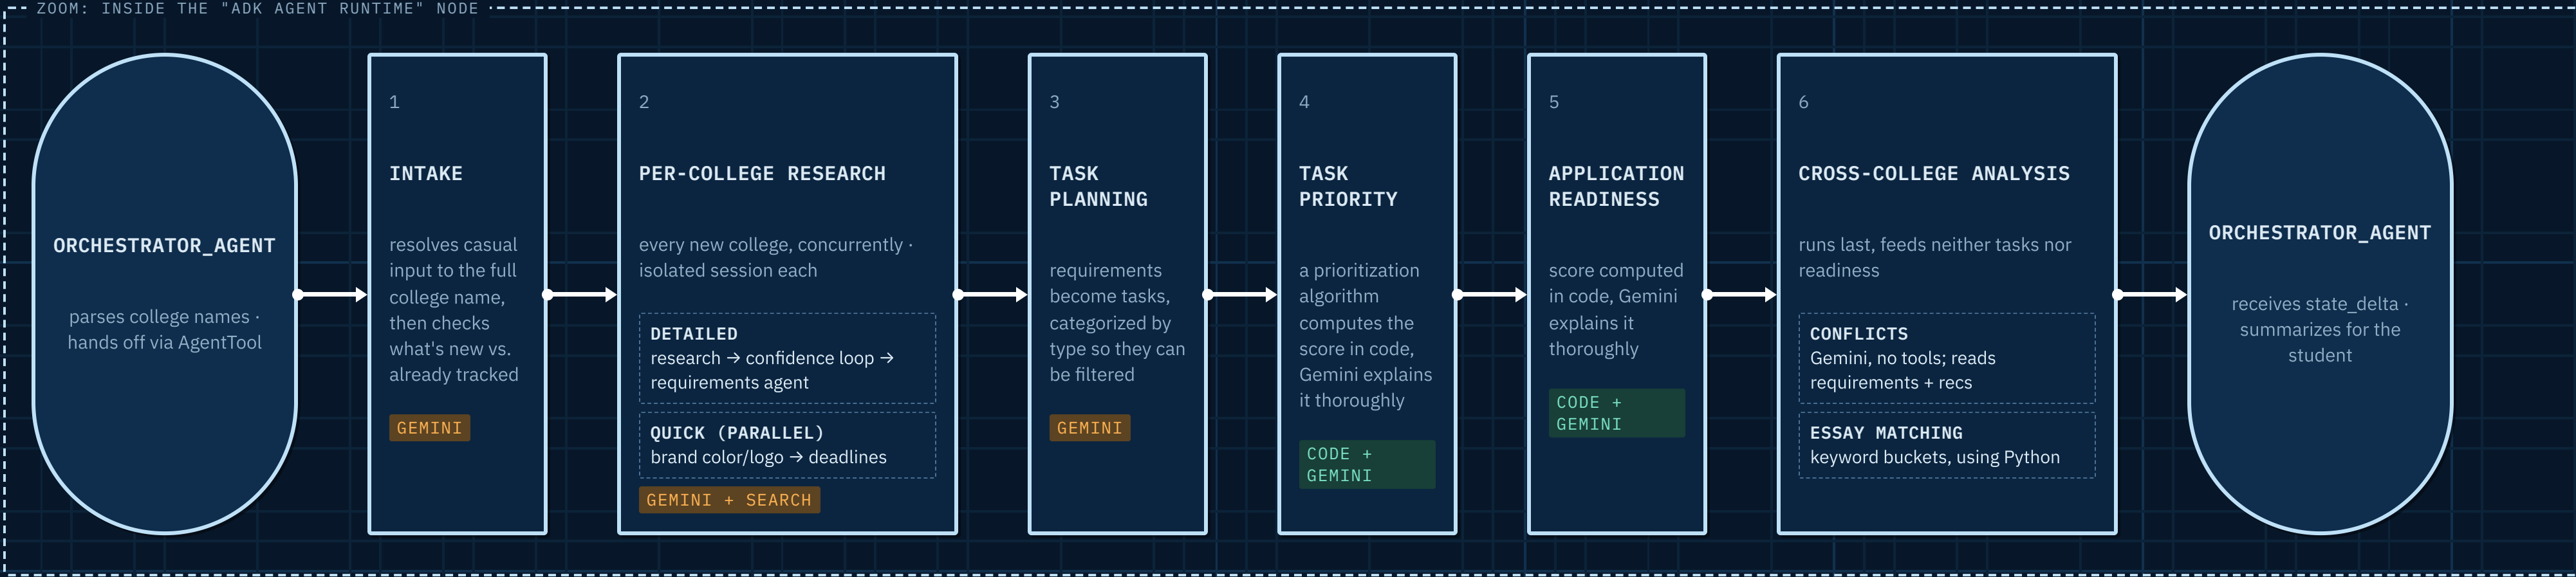

One Cloud Run service serves the frontend, the REST API, and the ADK agent runtime, one Firestore database holds it all. **Gemini 3.6 Flash** runs the whole research pipeline, end to end. **Gemma 4** takes the first pass on every essay's grammar check, genuinely smaller and faster than Gemini, before Gemini re-checks the whole essay independently.

Frontend — React SPA, served as static files off the same origin	Backend — FastAPI + ADK agent runtime, one image	Database — Firestore, per-user document tree	Models — Gemini 3.6 Flash (Vertex AI) · Gemma 4 26B-A4B (Google AI Studio)
